Part 1 – MANAGEMENT

1.1. PURPOSE

This capability list manual identifies the products that may be maintained by the General Electric Aviation Systems CAA/EASA Part 145 and FAR Part 145 approved maintenance organisation and released to service on an CAA or EASA Form One or Dual CAA Form One release under Maintenance Agreement Guidance (MAG) between the FAA (for the USA) and CAA (for the United Kingdom).

1.2 ABBREVIATIONS AND ACRONYMS

The abbreviations and acronyms that may be used herein are listed below.

CAA	Civil Aviation Authority
EASA	European Union Aviation Safety Agency
FAA	Federal Aviation Administration
FAR	Federal Aviation Regulations
TBA	To be Assigned

1.3 ORGANISATION

This capability list manual is organised into three parts, as described below.

Part 1: explains the purpose and organisation of the Capability List Manual as well as the procedures used for control of the manual.

Part 2: provides a list of the equipment that the approved maintenance organisation has been authorised by the Civil Aviation Authority (which includes authorisation to FAA) and The European Union Aviation Safety Agency to maintain and release to service.

The list provides the following information in sufficient detail to adequately identify each item of equipment under the appropriate CAA, EASA and FAA rating:

Component Rating	Identifies the CAA, EASA, FAA rating for the equipment
ATA	Air Transport Association Rating
Manufacturer	Identifies the manufacturer of the equipment
Part Number Description	Identifies the manufacturer's name for the equipment
Part Number	Identifies the manufacturer's part number for the equipment
Approved Maintenance Data	Identifies the reference number of the approved maintenance data used to perform the maintenance
Scope	Identifies the type of maintenance permitted for the equipment
Aircraft /Engine /ETSO /TSO	Identifies the aircraft/engine to which the equipment applies and/or the Technical Standing Order

Part 3: is used for attaching accepted amendments to the capability list until the capability list manual is next revised. It contains a record of amendments list. This list is updated by the Quality department with the same information as above (Part 2) but with an added amendment date field.

1.4 MANUAL CONTROL

1.4.1 Responsibility

The Quality department is responsible for the management of this capability list manual and shall ensure that the equipment entered in Parts 2 and 3 of the manual is within the authorised scope of work of the maintenance organisation, as defined in the maintenance organisation expositions for CAA (including the Operations Specification for FAA) and EASA.

Note

The maintenance organisation will only perform maintenance, preventive maintenance, or alterations on an article if it is listed on the current capability list and within its scope of work and/or the limited ratings stated on the Operations Specifications.

1.4.2 Amendments

Amendments are changes to the capability list that do not require a full revision of the manual - for example, updating the "Record of Amendments" in Part 3 of the manual with new, amended and/or (*to be*) deleted Parts at next revision or correcting minor spelling mistakes, etc.

Those items listed in Part 3 as deleted, suspended or amended will also have the Part Number (row) and/or significant amendment highlighted "Grey" in Part 2 List of Equipment until it is removed/amended at next revision as per §1.4.3.

Note: Each new amended document will be electronically saved at increasing increments e.g. Rev 5 will become Rev 5.1; 5.2 etc. until a new full revision is raised i.e. Rev 6. New part numbers may only be added to the Record of Amendments if the part number is within the current maintenance organisation ratings, the maintenance data has been approved by the holder of the design organisation approval (which is in most cases the TC holder) and a self-evaluation has been successfully performed as defined in § 1.4.2.1 below.

Amendments Approval:

- a. CAA – Indirect approval is given by the CAA who will be notified of additions/amendments to the capability list within 7 days via their submission process apply@caa.co.uk
- b. EASA – Indirect approval is given by EASA who will be notified of additions/amendments to the capability list with in 7 days via their submission process <https://portal.easa.europa.eu/login>
- c. FAA – Is not required by the FAA prior to being included in the Record of Amendments provided that the above requirements have been satisfied and the CAA receive a copy of the updated record of amendments as defined in § 1.5 below.

A read only copy of the amended capability list manual will be posted on the company Intranet for access by all maintenance organisation personnel.

1.4.2.1 Capability List Self-Evaluation Procedure

When a part is to be added to the capability list manual, the Maintenance Organisation will nominate a qualified person(s) to ensure that:

- a. The maintenance organisation has all the facilities, tools and equipment and personnel required in order to perform the work to be performed on the new part
- b. The maintenance organisation is in possession of current technical data, approved by the holder of the design organisation approval, that covers all the work, tests, and inspections be performed on the new part
- c. The personnel who will perform the work and inspections on the new part have received adequate training.

The above process will be controlled by an automated Workflow Found via the QMS web page ref. Level 5 >QA Forms >QALF-013M. When necessary, the Person(s) nominated shall initiate the first step in the "workflow" - After various steps (ref. above) the workflow will be submitted to the quality department.

The quality department shall then verify the maintenance organisation has the correct ratings for the new part and/or amendment requested then, if necessary, forwarded to the CAA/EASA ref - § 1.4.2a.

Only those part numbers that are within the current ratings and satisfy the above self-evaluation requirements shall be added to the Amendments Part 3 of the Capability List Manual. An electronic copy of all self-evaluations shall be kept on file with the Quality department for a minimum period of 3 years.

1.4.3 Revisions

This capability list manual will be revised as necessary (but as a minimum at least once per year) to ensure that its contents are accurate, complete and adapted to the changing needs / requirements / capabilities of the approved maintenance organisation which must remain in compliance with the applicable CAA/EASA Part 145 requirements and FAR Part 145 regulations.

Revisions to the capability list manual shall be:

- a. Approved by the Quality Manager who shall sign and date the List of Effective Pages at the front of the Capability List Manual.
- b. Submitted to the CAA and EASA with an accompanying letter/email; explaining the change(s) introduced by the revision.

At each full revision, the parts listed in Part 3 Amendments, will be incorporated in or removed from Part 2, Equipment List, and the amendments list will be emptied.

The changes will be indicated by a line (|) in the left hand margin alongside the changed text.

The revision shall include a new List of Effective Pages signed by the Quality Manager

Training on new parts added to the capability list manual will be provided by Operations and Technical services. A record of the training shall be kept on file with the human resource department and an attestation of training shall be provided to the attendees.

Training records shall be kept for a minimum of 3 years after the person concerned has ceased to perform maintenance organisation activities or has left the company.

1.4.4 Audit of capability list manual

The capability list shall be audited as part of the annual audit on the maintenance organisation to ensure that the maintenance organisation continues to have the necessary housing, facilities, equipment, and technical data to meet all necessary requirements for maintaining the articles listed in the capability list. The maintenance organisation must ensure that it has all these items available prior to performing any maintenance.

1.5 DISTRIBUTION

The Quality department shall ensure that the capability list manual and all amendments and revisions are provided to the CAA and EASA together with an accompanying letter/email to explain the changes introduced by the amendment or revision. A complete new copy shall be issued after each new revision.

The Quality department shall also ensure that the capability list manual and all amendments and revisions are posted on the company Intranet and that the maintenance organisation personnel are informed by e-mail of the amendments / revisions.
