

# GE Passport™ Turbofan

Setting new standards for ultra-long range business jet reliability and efficiency.

## The new flagship engine class for performance

Using technology perfected on various GE engine platforms, the Passport's performance surpasses any other engine in its class. Not only does the Passport enable ultra-long range travel, including powering the largest business jet, its reduced noise and lower emissions contribute to an optimal experience for both operators and passengers.

Furthermore, the Passport's excellent reliability and efficiency are key enablers to the milestone achievements of the world-record\* setting Bombardier Global 7500 aircraft.

\* Recognized by Bombardier Inc., world-record achievements include 'Longest range flight in business aviation', 'Fastest continental US flight from New York to Los Angeles', and 'Fastest transatlantic flight from New York to London'.

The Passport is raising the bar of engine performance through commercial-grade technology.

### Greatest flight range

Leveraging the same ultra-long range technology as the GENx engine, Passport offers an industry leading 8% better fuel efficiency than other engines in its class.

### Prognostic health management

Beyond standard performance monitoring, the Passport's advanced FADEC (Full Authority Digital Engine Control) data monitoring system enables greater efficiencies including lower maintenance costs and reduced down time.

### Noise reduction

Advanced blisk technology delivers industry leading noise reduction that meets CAEP/6 NOX emissions and Stage 4 requirements. These design features enable an ultra quiet and productive cabin environment for passengers.
